

# Free-Body Diagrams

In each case an object is acted on by one or more forces. All drawings are in a vertical plane, and friction is negligible except where noted. Draw accurate free-body diagrams showing all forces acting on the object. Use pencil so you can correct mistakes. The first one is done as an example.

<p>1. Static</p> 	<p>2. Static</p> 
<p>3. Object falling, no air friction.</p> <p>Eep!</p> 	<p>4. Static</p> 
<p>5. Static</p> 	<p>6. Static</p> 
<p>7. Static</p> 	<p>8. Static</p> 

9. Sliding without friction.

10. Static friction prevents sliding.

11. Sliding at constant speed without friction.

12. Falling at constant (terminal) velocity.

13. Decelerating because of kinetic friction.

*assume moving to the left*

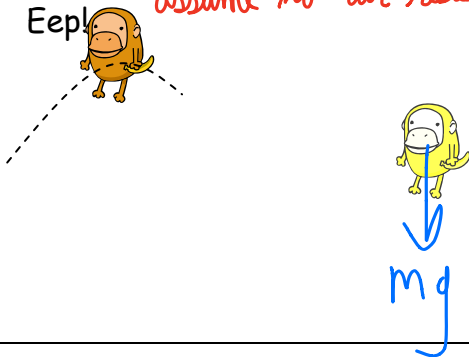

14. Rising in a parabolic trajectory.

*assume no air resistance*

15. At the top of a parabolic trajectory.

*assume no air resistance*

16. Tied to a rope and pulled straight upward.

Accelerating upward at  $9.8 \text{ m/s}^2$ . No friction.
